My recommendation for DropTicks AI is Bloom — Your Personal Glow-Up & Self-Care App. 🌸
Build an app that feels premium, calming, feminine, and satisfying to use. It should be visually impressive enough to stop someone scrolling on Instagram, while demonstrating that DropTicks AI can turn a business idea into a polished Flutter application.

Bloom — Your Daily Reset

16
The concept: A personal space where college students and young women can build better routines, track their moods, organize self-care, and work toward becoming the version of themselves they want to be.
Tagline: Small habits. Softer days. A better you.

1. Core features

Personalized daily dashboard
A beautiful “Good morning” greeting, daily goals, completion rings, streaks, and a quick overview of today's routine.

My Glow-Up Routine
Create morning and evening routines with skincare, reading, hydration, exercise, journaling, or any personal habit.

Mood Check-In
Select how you feel using expressive emoji cards, add a short journal entry, and view your mood history privately.

30-Day Reset Challenge

A guided journey with small daily goals, progress milestones, and rewarding completion animations.

Progress & Achievements
Weekly progress charts, completed habits, streaks, and milestone cards users can save or share.

2. The visual direction

Blush pink
Primary accent

Warm cream
Main background

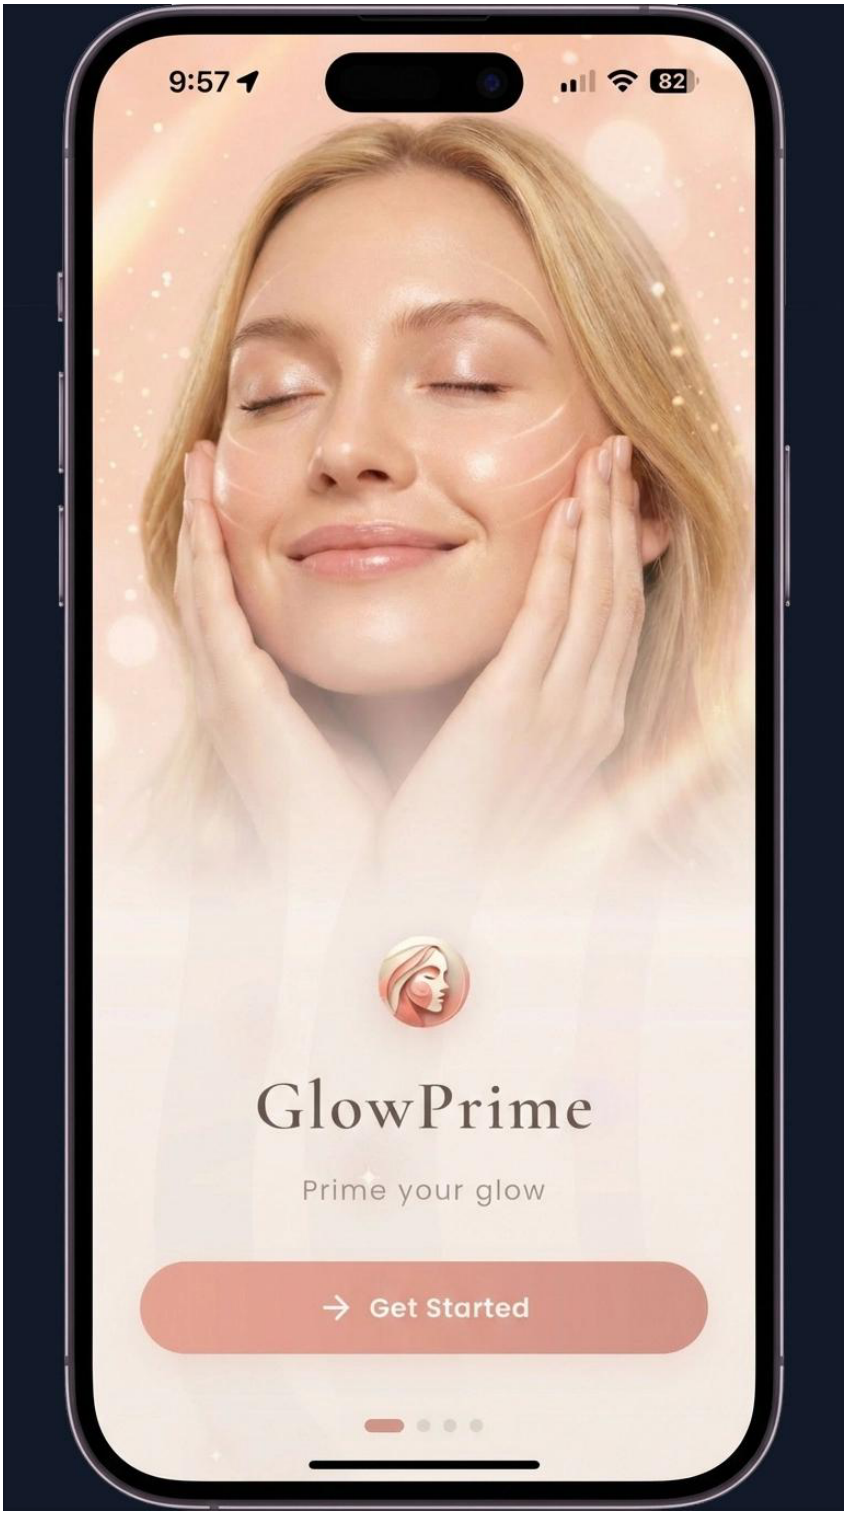

Sage green
Progress accents
Design it with elegant typography, rounded cards, subtle gradients, soft shadows, smooth transitions, and satisfying check-off animations. Avoid making it look like a generic admin dashboard.

3. Compact Flutter MVP

Keep the first version small enough to build quickly, but polished enough to demonstrate to potential clients.

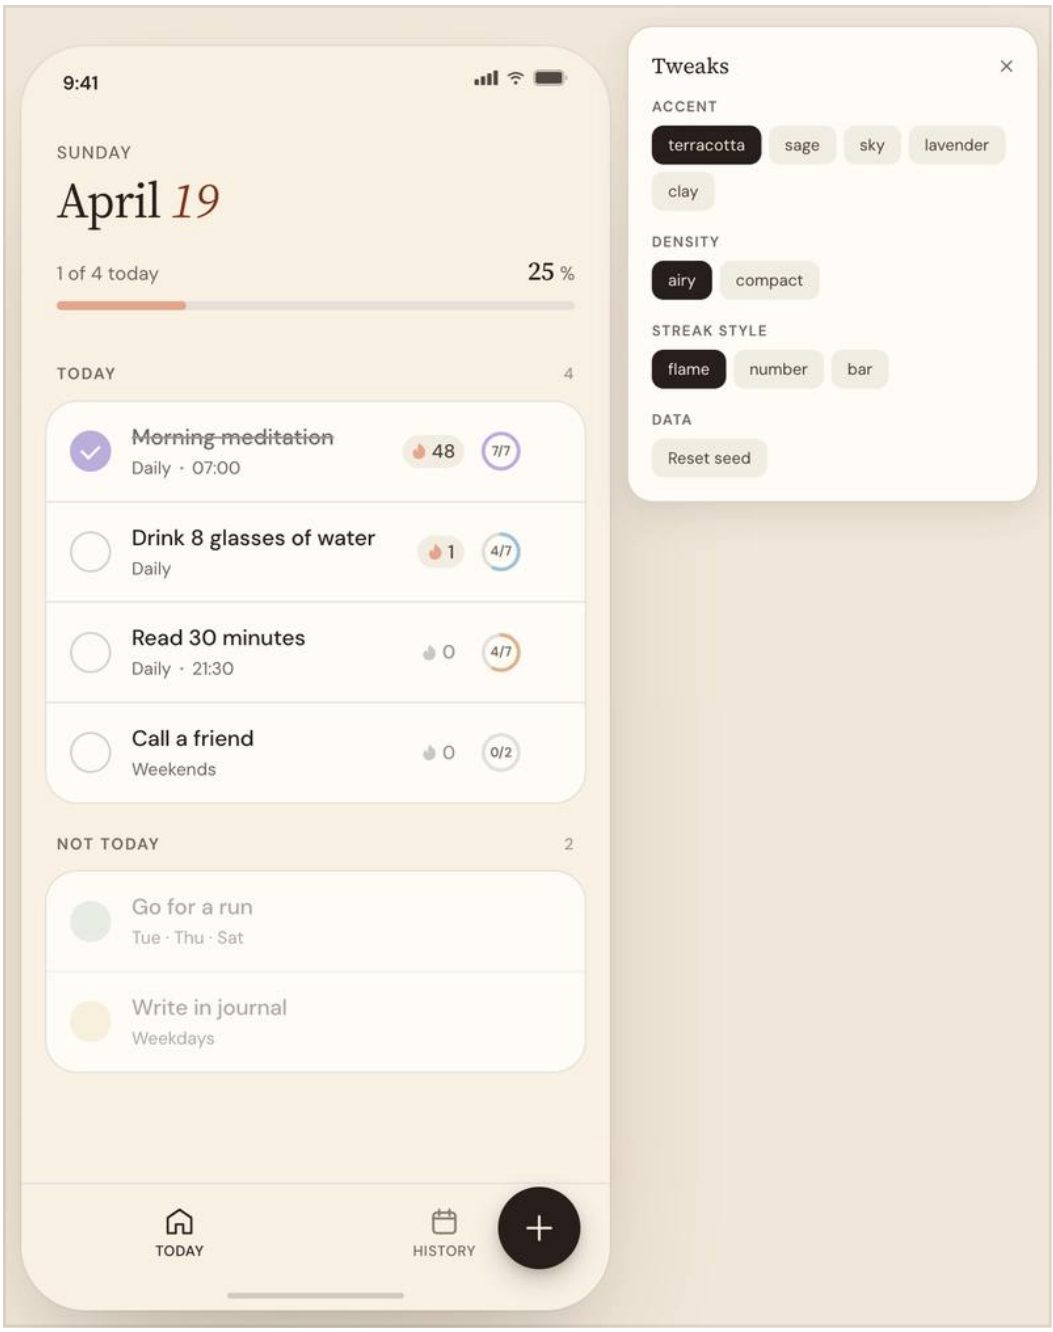

5 core screens

A focused, demo-ready application

01 — Welcome
Brand introduction, a beautiful hero illustration, and a “Start Your Reset” CTA.

02 — Home
Greeting, daily routine, progress ring, streak counter, and daily inspiration.

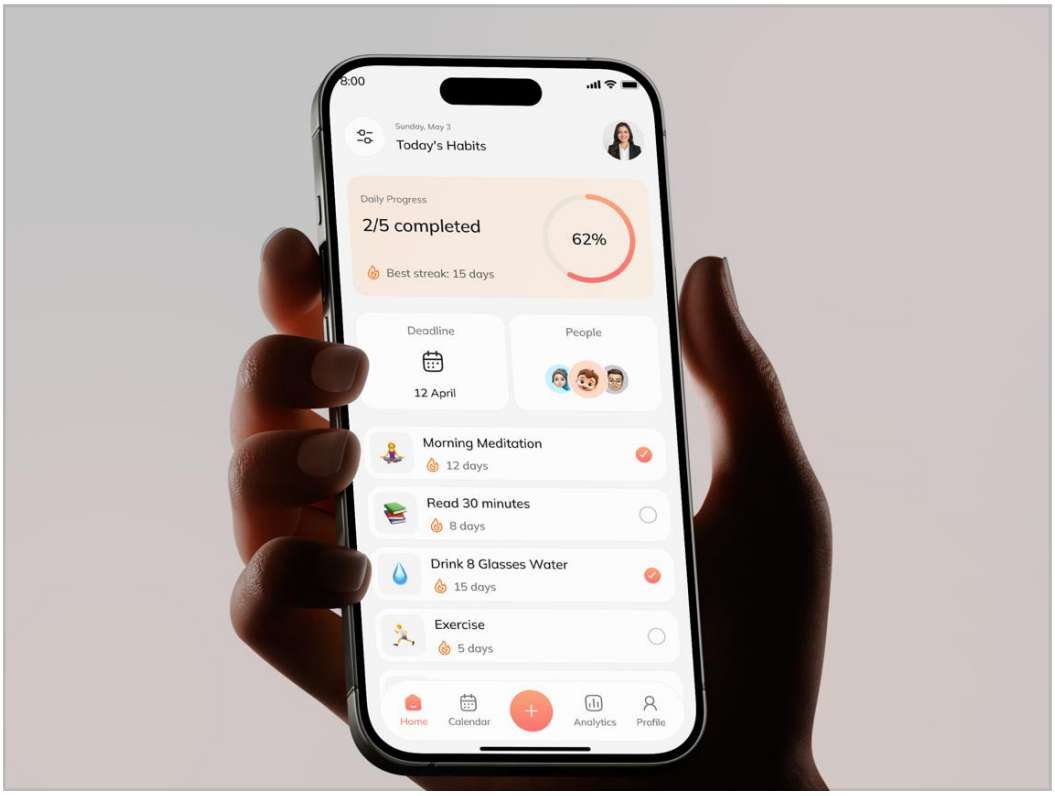

03 — My Routine
Add, edit, and complete habits; save morning and evening routines.

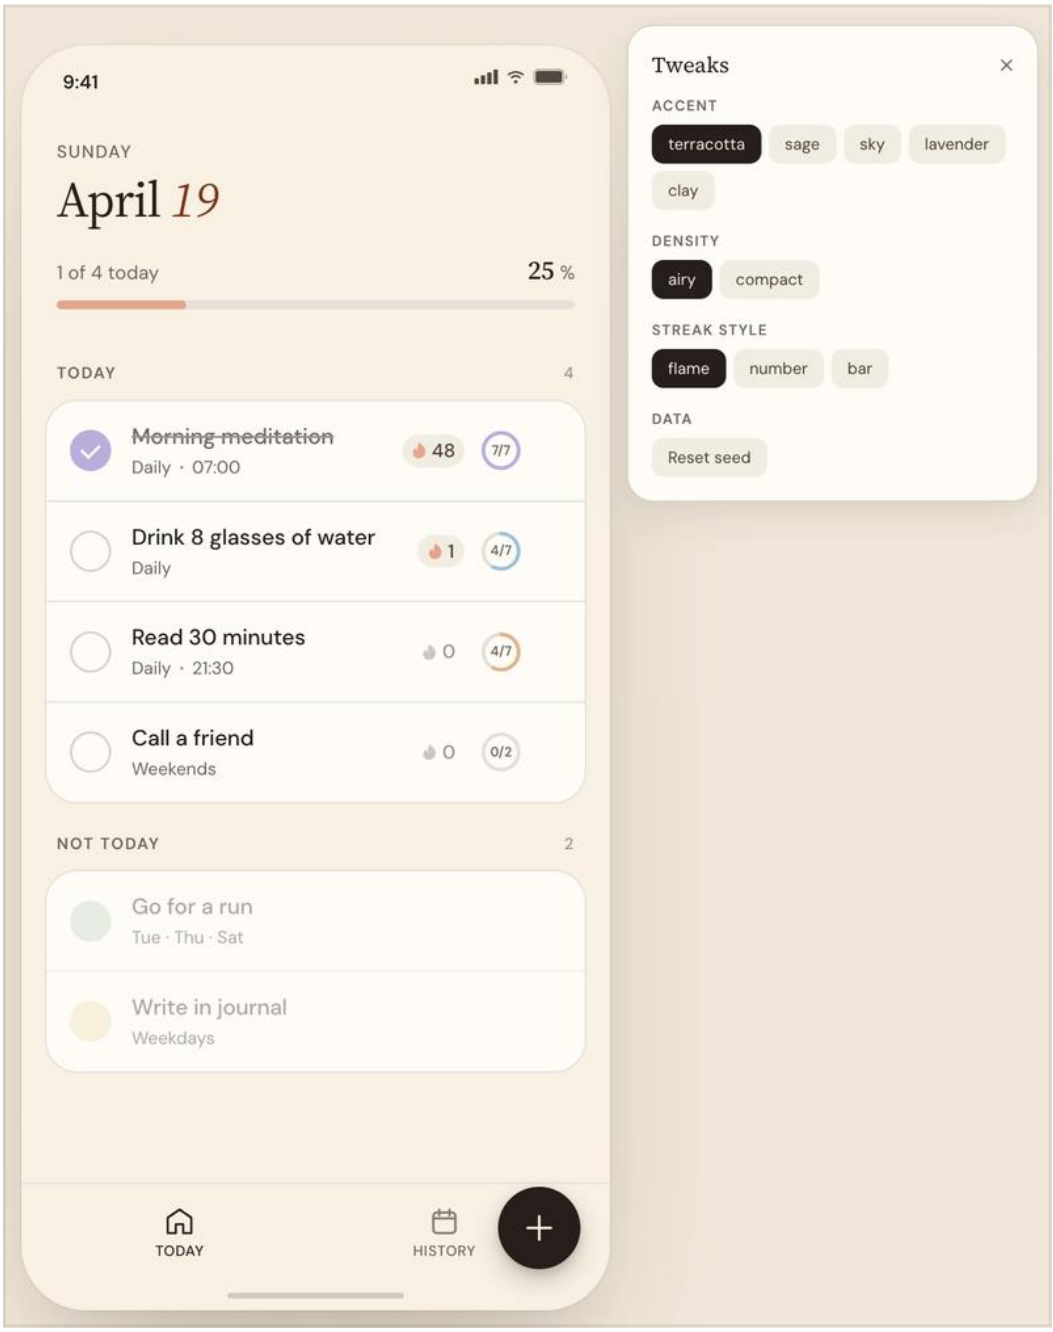

04 — Mood Journal
Daily mood selection, short journal entries, and a simple history view.

05 — My Progress
Weekly statistics, challenge milestones, achievements, and shareable progress cards.
Suggested stack: Flutter, local persistence with Hive or shared preferences,

and local notifications. Start without a backend, login, subscriptions, or AI features. Add those only if the concept attracts real interest.

4. Make it sell on Instagram

12
Create a 15–20 second Reel:

- 0–3 sec: “What if your phone helped you become your best self?”
- 3–7 sec: Show the beautiful Bloom dashboard.
- 7–11 sec: Tap habits, complete a routine, and animate the progress ring.
- 11–15 sec: Show mood tracking and the 30-day challenge.

- 15–20 sec: Finish with the app logo and a strong client-acquisition CTA.

Use the finished app itself in the recording rather than relying entirely on mockups.

5. Turn the demo into client leads

The objective isn't necessarily to launch another self-care business. It's to use Bloom as a portfolio product that proves DropTicks AI can design and develop real mobile apps.

Suggested final screen for the Reel:

Have an idea? Let's build it.

Your vision deserves more than a sketch. DropTicks AI turns ideas into beautifully designed mobile apps.

My advice: build Bloom's five screens first, make the interactions genuinely work, and use it to attract founders, beauty brands, wellness businesses, and entrepreneurs who need their own apps. The strongest showcase is not just a pretty interface; it is a beautiful interface backed by a working product.
